

AMENDMENTS TO THE ABSTRACT

Please replace the following substitute abstract for the abstract currently on file:

The present invention relates to a double-sided metallic laminate for a printed circuit board and a method for manufacturing the same. The double-sided metallic laminate which comprises a metallic layer at one side, a resin layer of a polyimide for improving adhesion with a metal, a resin layer of a low expansion polyimide having a thermal expansion coefficient of 5×10^{-6} to $2.5 \times 10^{-5} / [E] \text{ } ^\circ\text{C}$ and a metallic layer at the other side, has excellent flexibility and thermal resistance, can prevent curl and is securely laminated, particularly without the use of an adhesive. Therefore, it is suitable for a printed circuit board of a small size electric appliance.
